

DOORS AND VENEERED SOLUTIONS FOR THE HEALTHCARE INDUSTRY

Eggers Industries

Eggers Industries provides custom design and construction solutions for the healthcare industry. From large hospitals to private clinics, we provide quality products that enable healthcare providers to perform at their best. Whether it's lead-shielded doors for x-ray rooms, privacy doors for patient rooms or examination room components – Eggers' meticulously crafted products surpass the highest industry standards.

Turning nature's beauty into works of art

Lead-Shielded Doors

Lead-shielded doors are ideal for use in x-ray rooms and radiation treatment facilities. Eggers' lead-shielded 5-ply flush doors are manufactured under the strictest quality control and offer the highest possible level of radiation protection.

- Lead thickness from 1/32"-1/8".
- Available in 20-, 45- and 60-minute fire ratings.
- Lite cutouts up to 1269 sq. in. (factory glazing available).
- Select from 4' x 10' singles or 8' x 10' pairs.

Removable True-Divided Grillwork

Removable true-divided grillwork is a cost-effective and practical alternative to traditional true-divided lites. The grillwork provides a high-end appearance without the need for high-maintenance. It easily snaps in and out of door lite openings for effortless cleaning.

Acoustical Doors

Eggers' acoustical doors have the highest STC ratings in the industry. Maximum rated for their class – STC 40 for true stile & rail doors and STC 51 for flush doors, they provide the necessary sound control medical facilities need. Our acoustical doors not only shield visitors and patients from loud, disturbing noises, they also help increase staff productivity by minimizing distracting and invasive sounds.

- Versatile – can be faced with veneer, plastic laminate or MDO.
- STC 48 and 51 doors can be used as acoustically rated x-ray shielding doors.

Fire-Rated Doors and Frames

Eggers' fire-rated doors offer superior functionality with equally impressive aesthetics. Our extensive manufacturing capabilities include fire-rated door pairs without metal meeting edges. Just specify 'no metal edge construction' to do away with unsightly edges.

Whether flush or true stile & rail doors, they're fire-rated up to 90-minute for both negative and positive pressure. Our veneered door frames are rated from 20- through 90-minute while our solid lumber frames are fire-rated up to 45-minute. Eggers' true-divided lite doors are rated up to 20-minute, while our full-lite doors come with 20- and 45-minute ratings.

eiDoors for High Impact Applications

Pair the strength and protection of InPro Corporation's Rigid Sheet and the quality and performance of Eggers Doors to make eiDoors - supremely durable doors that withstand high amounts of traffic and abuse while maintaining an attractive decor. Now, eiDoors are available with replaceable edges on both the hinge and lock edges for convenient, on-site replacement - offering a convenient, high quality, and cost effective solution for maximum protection against door damage.

Manufacturing Capabilities

Our comprehensive, in-house capabilities are key success factors for healthcare projects with vast and diverse hardware requirements. Eggers' UV finish contains no added urea-formaldehyde and is free of Volatile Organic Compounds (VOC). It provides a strong and protective shield to all wood veneer products. Additionally, our antimicrobial topcoats help maintain a sterile environment.

We are able to manufacture and construct oversized doors. Our flush doors can go up to 4' x 11' while our stile & rail doors can measure up to 4' x 11' for singles and 8' x 11' for non-rated pairs.

Solid Lumber Edges

All Eggers doors are available with solid lumber edges. Unlike veneer over SCL, Eggers' solid lumber edges provide the extra heavy-duty durability required by busy medical facilities. Eggers doors are built to withstand the most rigorous use on a daily basis.

Recessed Metal Edgeguards

Eggers' recessed metal edgeguards protect doors while still providing a sleek profile. The metal edgeguards shield doors against daily abuse from busy, high-traffic hospital activity. Because Eggers' edgeguards are recessed, the metal lays flush with the veneer to enhance durability without compromising the aesthetic quality of our doors.

Mini-Blind Units

Eggers' mini-blind glass units are the perfect solution for patient privacy. The 1" blinds are encapsulated between two sheets of 1/8" tempered glass for easier cleaning and maintenance. Eggers' mini-blind units offer several options for tilting and raising.

Eggers releases regular product updates. Please visit www.eggiersindustries.com for the most current and accurate technical information. Specification details published online supercede those in print.
