---

**Acoustical Wood Jambs:** Eggers Industries has developed an acoustical wood jamb that, when used in combination with an Eggers' acoustical door, can provide an STC rating of up to 45. Previously, the use of a grouted steel frame was required to maintain the rating on Eggers' acoustical doors. Eggers' new acoustical wood jamb offering allows openings with acoustical applications to have matching doors and frames for a consistent color and appearance. The new acoustical jamb will be sold only in combination with Eggers' acoustical doors.

**Active/Active Acoustical Pairs:** Eggers now offers an active/active option for paired acoustical doors. These pairs carry an STC rating of 40 or 41 without the use of an astragal. The new construction utilizes gasketing system "K" and requires the use of top-latching surface hardware.

**Acoustical eiDoor:** Eggers has added an eiDoor to its acoustical product offerings. The acoustical eiDoor carries an STC rating of 43 and is offered with a 20 minute fire rating. The eiDoor is a vinyl-clad flush door created through a partnership between Eggers Industries and InPro. The door is manufactured in InPro's Rigid Vinyl Sheet face material and Eggers' door construction. The doors withstand the most demanding environments, including educational, healthcare, and high-traffic applications.
